

Investment Philosophy

We believe a strategy using a basket of stocks/ETFs, covered calls, and secured puts may achieve higher risk-adjusted long-term returns than the MSCI All Country World Index, consistent with reasonable risk to principal.

Investment Strategy

- Holds stocks and/or Exchange Trade Funds (ETFs) selected with the goal of closely tracking the total return of the MSCI All Country World Index.
- In addition to the potential for capital appreciation on the underlying portfolio, the strategy seeks to generate premium income by continuously writing covered call options on a significant portion of the portfolio's full value.
- May use cash-secured MSCI All Country World Index put options in conjunction with, or instead of, covered call options.
- Resets at least every expiration, managed continuously between expirations.
- The options selection process seeks to enhance risk-adjusted returns through selection of optimal options contracts.
- Considerations include covered calls vs. cash secured puts, a strike price approximately +/- 2% of index value, and expiration date from 1 week to 3 months.

Product Highlights

- Provides underlying exposure to international developed market equities.
- Designed to balance upside participation potential with downside risk management.

Important Considerations

- Covered call writers forgo participation in any increase in stock prices above call exercise prices, and continue to bear the downside risk of stock ownership if stock prices decrease more than the premium income received from writing options.
- A secured put strategy has a risk/return profile similar to a covered call strategy on the same index. Market prices will influence choice of strategy.
(Source: Options Clearing Corp.)
- Writers of put options bear the risk of loss if the value of underlying stocks decline below the exercise price, and resulting losses could be substantial if stock price declines are significant.

Please see the GIPS® presentation for further explanation.

The Global Secured Options Composite objective is long-term capital appreciation and option premiums consistent with reasonable risk to principal by using option writing strategies. The strategy utilizes buy-write (covered call) and/or cash-secured put option strategies on U.S. or foreign stock index exchange traded funds ("ETFs"), U.S. or foreign stock indices and/or individual U.S. or foreign stocks held by the Portfolio. Covered call and cash-secured put options are intended to reduce volatility, earn option premiums and provide more stable returns. Selling call options reduces the risk of owning stocks by the receipt of the option premiums and selling put options reduces the purchase price of the underlying stock, but both strategies limit the opportunity to profit from an increase in the market value of the underlying security in exchange for up-front cash at the time of selling the call or put option. The strategy invests in options which have risks of unlimited losses of the underlying holdings due to unanticipated market movements and failure to correctly predict the direction of the securities prices, interest rates and currency exchange rates. This investment may not be suitable for all investors. Investing in Non-U.S. securities may entail risk due to foreign economic and political developments, and may be subject to currency risks and differences in accounting methods. These risks are greater in emerging markets.

The MSCI All Country World captures large and mid-cap representation across 23 Developed Markets (DM) and 23 Emerging Markets (EM) countries. With 2,480 constituents, the index covers approximately 85% of the global investable equity opportunity set. One cannot invest directly in an index.
