

Quantitative U.S. Large Cap Core Equity Portfolio

Institutional Shares: GTLIX

Q4 | 2024

Investment Philosophy

We believe a portfolio of select large cap stocks may achieve above-benchmark long-term performance through capital appreciation, and by limiting downside risk.

Investment Strategy

- Invests in large cap companies we believe have an attractive combination of valuation, fundamental, earnings and technical characteristics.
- Utilizes proprietary, multi-factor, sector-specific models to rank stocks within each sector.
- Initial equal weight positions.
- Optimizes the portfolio to provide broad diversification across sectors, industries and individual companies, while controlling turnover.
- Utilizes proprietary risk screens to eliminate stocks we believe are likely to underperform.

Product Highlights

- Quantitatively-based investment process with stringent risk controls.
- Integrates fundamental factors into proprietary quantitative models.
- Focuses on underperformance risk as much as outperformance opportunity.

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will change so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance of the fund may be lower or higher than the performance quoted. Performance data current to the most recent month end may be obtained by calling 1.800.442.8299.

All figures based on monthly data as of 12/31/2024

^{*}The Institutional Shares commenced operation on December 30, 2015; therefore, performance listed for the Institutional Shares prior to the inception date (2/27/2004 through 12/29/2015) is based on the average total return for the Advisor Shares. Performance listed for the period of 12/30/2015 through 12/31/2024 is the average annual total return for the Institutional Shares.

The fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The Glenmede Funds' prospectus contains this and other important information about the investment company, and it may be obtained by calling 1.800.442.8299, or visiting www.glenmedeim.com. Please read the prospectus carefully before you invest or send money. Mutual fund investing involves risks; principal loss is possible. The Fund may invest in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. The Fund may invest in IPOs and the market value of IPO shares could fluctuate considerably due to factors such as the absence of a prior public market, unseasoned trading, the small number of shares available for trading, and limited information about the issuer. Diversification does not assure a profit or protect against loss in a declining market. All returns are calculated in U.S. dollars. Beta: systematic risk of a portfolio; represents sensitivity to the benchmark. Excess Return: amount that returns exceed relative benchmark return. Information Ratio: ratio of expected return to risk, as measured by standard deviation. Sharpe Ratio: sharpe ratio is a simple measurement of the risk-adjusted performance. Price to Book (P/B): ratio of stock price to per share shareholders' equity. Price to Earnings (P/E): ratio of stock price to earnings. Batting Average: batting average is calculated by dividing the number of quarters in which the manager beats or matches the Index by the total number of quarters in the period of question and multiplying that factor by 100. **Return on Equity (ROE):** net income divided by equity. **Standard Deviation:** measures dispersion of a set of data from its mean. **5-Year EPS Growth:** annualized historical earnings per share growth over the last 5 years. EPS Growth is not a forecast of the fund's future performance. **Tracking Error:** measures the active risk of the portfolio and the annualized standard deviation of the excess returns between the portfolio and its benchmark. **Weighted Average Market Cap:** total value of all outstanding shares weighted to reflect the portfolio's positions. The Russell 1000 Index is an unmanaged, market-capitalization-weighted total return index comprised of the largest 1,000 companies in the Russell 3000 Index. This unmanaged index is a total return index with dividends reinvested. The S&P 500 Index is a broad based unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general. **Doe cannot** invest directly in an index. Total returns comprise price appreciation depreciation and income as a percentage of the original investment. The Morningstar The comparison of the largest 1,000 comparison inter Russel 3000 intex is a broad based unmanaged index of 500 stocks, which is widely recognized as representative of the equity market in general. One cannot invest directly in an index. Total returns comprise price appreciation/depreciation and income as a percentage of the original investment. The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history, without adjustment for sales loads. Exchange-traded funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating™ for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating™ metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Each Morningstar category average represents a universe of funds with similar objectives. Morningstar ratings represented as unshaded stars are based on extended performance. These extended performance rat
